Expr3ss! - Software that Solves Staff Selection

As a former State hockey representative, merchant banker and Company Secretary of an ASX-listed IT business, Carolyne Burns knows a thing or two about high-performers. In 1996 she partnered with Dr Glyn Brokensha, a physician, psychotherapist and corporate business adviser, in launching Expr3ss!

As joint Managing Directors they offer software that solves staff selection for a diverse range of listed companies, SMBs and family businesses, many experiencing rapid growth. The Expr3ss! cloud-based predictive hiring software uses proprietary algorithms to quickly pinpoint applicants that have 'can do skills, 'will do' attitudes and 'fit to' role characteristics similar to existing successful high-performing company employees.

The Expr3ss! Survey is used by employers to gain a competitive advantage. It reveals the attributes of applicants before they are signed up, predicting potential frictions and successful fit with team and culture.

"Expr3ss! improves productivity, removes guesswork, increases employee retention and demonstrates significant savings in time and money." – Carolyne Burns, Joint Managing Director
